Key Words: Scientific Portal Enterprise Architecture

Part of the interagency “Center of Excellence” is an Environmental Scientific Portal, which will integrate environmental science and deliver robust tools to decision makers. The portal will allow the sharing of data and models between researchers, enabling them to perform more complex experiments. The portal will also allow decision makers access to the results of this research, improving their ability to develop plans, strategies and make the right decisions. EPA will work with a number of partners to establish this portal, including other federal agencies, states, tribes and local decision makers.
